

OVERVIEW

In today's thriving business environment data protection is paramount for small and medium businesses to succeed. Your data is arguably the most vital asset to your business and if any information is lost or compromised the resulting costs can be severe.

Within 12 months a typical small or medium business will suffer six computer outages.

The median cost of downtime for a small or medium business is \$12,500 per day after a data loss disaster.

With RevNet backup and disaster-recovery solutions, your business can ensure its most vital information is secure and protected. RevNet integrates full business continuity solutions and a complete fail-safe for your data with advanced virtualization technology. What this means is that when disaster strikes you can rest easy knowing your business will be back on its feet within minutes; not hours or days. Some key features include:

- Compatibility across a number of hardware platforms
- Granular snapshot in retention policies
- Instant offsite virtualization
- Monitoring and verification
- Full cloud replication
